NAME

CUTEST_ufn − CUTEst tool to evaluate function value.

SYNOPSIS

CALL CUTEST_ufn(data, status, n, X, f)

DESCRIPTION

The CUTEST_ufn subroutine evaluates the value of the objective function of the problem decoded from a SIF file by the script *sifdecode* at the point X.

The problem under consideration is to minimize or maximize an objective function $f(x)$ over all $x \in R^n$ subject to the simple bounds $x^l \leq x \leq x^u$. The objective function is group-partially separable.

ARGUMENTS

The arguments of CUTEST_ufn are as follows

data [inout] - CUTEST_data_type derived type
problem-specific private data,

status [out] - integer
the outputr status: 0 for a succesful call, 1 for an array allocation/deallocation error, 2 for an array bound error, 3 for an evaluation error,

n [in] - integer
the number of variables for the problem,

X [in] - real/double precision
an array which gives the current estimate of the solution of the problem,

f [out] - real/double precision
the value of the objective function evaluated at X.
