

**NAME**

CUTEST\_cnames – CUTEst tool to obtain the names of the problem and its variables.

**SYNOPSIS**

CALL CUTEST\_cnames( status, n, m, pname, VNAMES, CNAMES )

**DESCRIPTION**

The CUTEST\_cnames subroutine obtains the names of the problem, its variables and general constraints.

The problem under consideration is to minimize or maximize an objective function  $f(x)$  over all  $x \in R^n$  subject to general equations  $c_i(x) = 0$ , ( $i \in 1, \dots, m_E$ ), general inequalities  $c_i^l(x) \leq c_i(x) \leq c_i^u(x)$ , ( $i \in m_E + 1, \dots, m$ ), and simple bounds  $x^l \leq x \leq x^u$ . The objective function is group-partially separable and all constraint functions are partially separable.

**ARGUMENTS**

The arguments of CUTEST\_cnames are as follows

**status** [out] - integer

the output status: 0 for a successful call, 1 for an array allocation/deallocation error, 2 for an array bound error, 3 for an evaluation error,

**n** [in] - integer

the number of variables for the problem,

**m** [in] - integer

the total number of general constraints,

**pname** [out] - character

a 10-character string containing the name of the problem,

**VNAMES** [out] - character

an array of 10-character strings containing the names of the variables,

**CNAMES** [out] - character

an array of 10-character strings containing the names of the general constraints.
