

**NAME**

CUTEST\_ugrsh – CUTEst tool to evaluate the gradient and sparse Hessian matrix in coordinate format.

**SYNOPSIS**

CALL CUTEST\_ugrsh( status, n, X, G, nnzh, lh, H\_val, H\_row, H\_col )

**DESCRIPTION**

The CUTEST\_ugrsh subroutine evaluates the gradient and Hessian matrix of the objective function of the problem decoded from a SIF file by the script *sifdecoder* at the point X. This Hessian matrix is stored as a sparse matrix in coordinate format.

The problem under consideration is to minimize or maximize an objective function  $f(x)$  over all  $x \in R^n$  subject to the simple bounds  $x^l \leq x \leq x^u$ . The objective function is group-partially separable.

**ARGUMENTS**

The arguments of CUTEST\_ugrsh are as follows

**status** [out] - integer

the output status: 0 for a successful call, 1 for an array allocation/deallocation error, 2 for an array bound error, 3 for an evaluation error,

**n** [in] - integer

the number of variables for the problem,

**X** [in] - real/double precision

an array which gives the current estimate of the solution of the problem,

**G** [out] - real/double precision

an array which gives the value of the gradient of the objective function evaluated at X,

**nnzh** [out] - integer

the number of nonzeros in H\_val,

**lh** [in] - integer

the actual declared dimensions of H\_val, H\_row and H\_col,

**H\_val** [out] - real/double precision

an array which gives the value of the Hessian matrix of the objective function evaluated at X. The i-th entry of H\_val gives the value of the nonzero in row H\_row(i) and column H\_col(i). Only the upper triangular part of the Hessian is stored,

**H\_row** [out] - integer

an array which gives the row indices of the nonzeros of the Hessian matrix of the objective function evaluated at X,

**H\_col** [out] - integer

an array which gives the column indices of the nonzeros of the Hessian matrix of the objective function evaluated at X.

**NOTE**

Calling this routine is more efficient than separate calls to CUTEST\_ugr and CUTEST\_ush.
